

Closed water storage system

A patented closed water storage system for silos

Fully closed water storage system. The GenaFlexstore® is a worldwide patented closed water storage system in which the flexible silo liner and floating cover is integrated into one unit. A closed water system is the best solution against algae growth and pollution of the water, as external influence on the water quality is no longer possible.

The GenaFlexstore® is easy and quickly to install. The use of high quality reinforced and UV-resistant material guarantees a long life time worldwide. Due to the integrated system flapping damage to the liner is almost excluded. The system is ideal for high quality storage of several water types.

Applications

The GenaFlexstore® is suitable for rain-, drain-

and in a special version for drinking- water storage.

Advantages:

- Optimal water quality by prevention of algae growth and dirt like leaves, sand, dust etc
- No evaporation of water
- Maximum use of storage capacity
- No flapping damage due to integrated system
- Long life time due to use of durable materials
- Can be used in existing silos with minor adjustments
- Quick and easy installation
- Low maintenance
