

Aquatex® Supreme Liner

Genap is the global leader in the production of liners for use in water tanks and ponds. Working exclusively with world leading membrane manufacturers, Genap has now developed Aquatex® Supreme.

Aquatex® Supreme is the result of an extensive research and development project and takes into account the key technical elements required by the current market. Genap's Aquatex® Supreme has high UV and temperature resistance, high chlorine resistance and a certification for use in direct contact with drinking water.

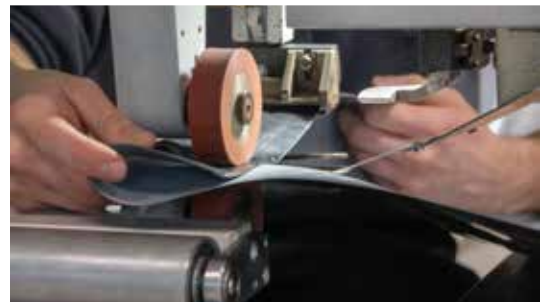

Lacking harmful plasticisers, liners made of Aquatex® Supreme are more environmentally friendly. Moreover, small repairs can be quickly and easily carried out with our very own specialized 'Quick Repair' tape.

Markets and Applications

Aquatex® Supreme is an excellent liner for water tanks and ponds for use in all horticultural fields and their various applications, especially in areas with high temperatures, UV radiation and large temperature fluctuations. In countries where chlorine is used to prevent water contamination, the material's market leading resistance to chlorine (up to 5ppm) is a major advantage. The liner can be used both in and outside the greenhouse and a full range of conical outlets is available.

Technical Data

- Chlorine resistance: max 5 ppm (5 mg/l)
- Temperature resistance: -40 to +70°C
- Weight: 630 g/m²
- Thickness: 0.7 mm
- Conforms to drinking water standards
- Life span: 10-15 years (depending on conditions)
- 10-year worldwide diminishing warranty

- ✓ Highly UV and weather resistant
- ✓ Suitable for storing (chlorinated) drinking water
- ✓ Extremely durable membrane
